BHARATI VIDYAPEETH DEEMED TO BE UNIVERSITY PUNE, INDIA

FACULTY OF MANAGEMENT STUDIES

Board of Studies in Computer Applications

Master of Computer Applications Programme

(Under Choice Based Credit System)

To be effective from 2018-19 at Part I

BHARATI VIDYAPEETH DEEMED TO BE UNIVERSITY PUNE, INDIA

FACULTY OF MANAGEMENT STUDIES

Board of Studies in Computer Applications
Master of Computer Applications Programme
(Under Choice Based Credit System)
To be effective from 2018-19 at Part I

1. INTRODUCTION

The MCA Program is a full time 150 Credits programme offered by Bharati Vidyapeeth Deemed to be University, Pune and conducted at its management institutes in Pune, Karad, Kolhapur, Sangli, and Solapur. All the five institutes have excellent faculties, Laboratories, Library, and other facilities to provide proper learning environment. The University is reaccredited by NAAC with an 'A+' grade (3rd cycle). The expectations and requirements of the software industry, immediately and in the near future, are visualized while designing the MCA programme. This effort is reflected in the Vision and Mission statements of the MCA programme. Of course, the statements also embody the spirit of the vision of Late Dr. Patangraoji Kadam, the Founder of Bharati Vidyapeeth and Chancellor, Bharati Vidyapeeth Deemed to be University which is to usher in "Social Transformation through Dynamic Education."

2. VISION STATEMENT OF MCA PROGRAMME

To create high caliber solution architects and innovators for software development.

3. MISSION STATEMENT OF MCA PROGRAMME

To teach 'things, not just words', 'how to think', and 'how to self-learn'.

4. OBJECTIVES OF THE MCA PROGRAMME

The main objectives of MCA Programme are to prepare the youth to take up positions as system analysts, system engineers, software engineers, programmers and of course as versatile teachers in any area of computer applications. Accordingly the course curriculum aims at developing 'systems thinking' 'abstract thinking', 'skills to analyze and synthesize', and 'skills to apply knowledge', through 'extensive problem solving sessions', 'hands on practice under various hardware/software environments', 'four minor projects and 'one

semester full-time internship project'. In addition, 'social interaction skills', 'communication skills', 'life skills', 'entrepreneurial skills', and 'research skills' which are necessary for career growth and for leading quality life are also imparted.

5. LEARNING OUTCOMES FROM THE MCA PROGRAMME:

At the end of the course the student should be able to:

- (a) Analyze problems and design effective and efficient software solutions.
- (b) Develop software under latest Application Development Environments.
- (c) Learn new technologies with ease and be productive at all times.
- (d) Read, write, and contribute to technical literature.
- (e) Work in teams.
- (f) Be a good citizen in all respects.

6. ELIGIBILITY FOR ADMISSION TO THIS PROGRAMME:

Admission to the programme is open to any candidate (Graduate) of any recognized University satisfying the following conditions.

- 1. The candidate should have secured at least 50% (45% for SC/ST).
- 2. Mathematics as one of the subject at 12th or graduation.

7 DURATION OF THE PROGRAMME

The duration of this programme is three years divided in to six semesters or a minimum of 150 credits whichever is later. The medium of instruction and examination will be only English.

8 SCHEME OF EXAMINATION:

For some courses there is Internal Assessment (IA) conducted by the respective institutes as well as a University Examination (UE) at the End-of-the Term. UE will be conducted out of 60 marks and IA will be conducted for 40 marks then these are converted to grade points and grades as per the Table I. For courses having only Continuous Assessment (CA) the respective institutes will evaluate the students in varieties of ways, three or four times,

during the term for a total of 100 marks. Then the marks will be converted to grade points and grades using the Table I.

9 STANDARD OF PASSING:

For all courses, both UE and IA constitute separate heads of passing (HoP). In order to pass in such courses and to earn the assigned credits, the learner must obtain a minimum grade point of 5.0 (40% marks) at UE and also a minimum grade point of 5.0 (40% marks) at IA.

A student who fails at UE in a course has to reappear only at UE as backlog candidate and clear the Head of Passing. Similarly, a student who fails in a course at IA has to reappear only at IA as backlog candidate and clear the Head of Passing to secure the GPA required for passing.

The 10 point Grades and Grade Points according to the following table:

Range of Marks (%)	Grade	Grade Point
80≤Marks≤100	О	10
70≤Marks<80	A+	9
60≤Marks<70	A	8
55≤Marks<60	B+	7
50≤Marks<55	В	6
40≤Marks<50	С	5
Marks < 40	D	0

Table 1

The performance at UE and IA will be combined to obtain GPA (Grade Point Average) for the course. The weights for performance at UE and IA shall be 60% and 40% respectively.

GPA is calculated by adding the UE marks out of 60 and IA marks out of 40. The total marks out of 100 are converted to grade point, which will be the GPA.

10 Formula to calculate Grade Points (GP)

Suppose that "Max" is the maximum marks assigned for an examination or evaluation, based on which GP will be computed. In order to determine the GP, Set x = Max/10 (since we have adopted 10 point system). Then GP is calculated by the following formulas

Range of Marks	Formula for the Grade Point
$8x \le Marks \le 10x$	10
$5.5x \le Marks < 8x$	Truncate (M/x) +2
$4x \le Marks < 5.5x$	Truncate (M/x) +1

Table 2

Two kinds of performance indicators, namely the Semester Grade Point Average (SGPA) and the Cumulative Grade Point Average (CGPA) shall be computed at the end of each term. The SGPA measures the cumulative performance of a learner in all the courses in a particular semester, while the CGPA measures the cumulative performance in all the courses since his/her enrollment. The CGPA of learner when he /she completes the programme is the final result of the learner.

The SGPA is calculated by the formula

where, Ck is the Credit value assigned to a course and GPk is the GPA obtained by the learner in the course. In the above, the sum is taken over all the courses that the learner has undertaken for the study during the Semester, including those in which he/she might have failed or those for which he/she remained absent. **The SGPA shall be calculated up to two decimal place accuracy.**

The CGPA is calculated by the following formula

$$CGPA = \frac{\Sigma C_k * GP_k}{\Sigma C_k}$$

where, Ck is the Credit value assigned to a course and GPk is the GPA obtained by the learner in the course. In the above, the sum is taken over all the courses that the learner has undertaken for the study from the time of his/her enrollment and also during the semester for which CGPA is calculated. **The CGPA shall be calculated up to two decimal place accuracy.**

The formula to compute equivalent percentage marks for specified CGPA:

	(10 * CGPA) - 10	If $5.00 \le CGPA < 6.00$
	(5 * CGPA) + 20	If $6.00 \le CGPA < 8.00$
% marks (CGPA)	(10 * CGPA) - 20	If $8.00 \le CGPA < 9.00$
	(20 * CGPA) - 110	If $9.00 \le CGPA < 9.50$
	(40 * CGPA) - 300	If $9.50 \le CGPA \le 10.00$

Table 3

11 Award of Honours:

A student who has completed the minimum credits specified for the programme shall be declared to have passed in the programme. The final result will be in terms of letter grade only and is based on the CGPA of all courses studied and passed. The criteria for the award of honours are given below.

		Performance	Equivalent Range of Marks
Range of CGPA	Final Grade	Descriptor	(%)
9.5≤CGPA ≤10	O	Outstanding	80≤Marks≤100
9.0≤CGPA ≤9.49	A+	Excellent	70≤Marks<80
8.0≤CGPA ≤8.99	A	Very Good	60≤Marks<70
7.0≤CGPA ≤7.99	B+	Good	55≤Marks<60
6.0≤CGPA ≤6.99	В	Average	50≤Marks<55
5.0≤CGPA ≤5.99	С	Satisfactory	40≤Marks<50
CGPA below 5.0	F	Fail	Marks below 40

Table 4

RULES OF ATKT:

- 1. A student is allowed to carry backlog of any number of subjects upto Semester IV.
- 2. A student must pass Part I (Semester I and II) to appear for Semester V.

SEMESTER WISE COURSE STRCTURE FOR MCA

(To be effective from July 2018)

SEMESTER I

Course	Course	Credits	Hours/Week			IA	EoTE
Number	Title					Marks	Marks
			L	T	P		
101	C Programming	4	3	1	-	40	60
102	Computer Organization And						
	Architecture	4	3	1	-	40	60
103	Database Management Systems	4	3	1	-	40	60
104	Discrete Structures	3	2	1	-	40	60
105	Management Functions	3	2	1	-	40	60
106	Web Supporting Technologies	4	2	-	4	40	60
107	C Lab	2	0	-	4	40	60
108	Soft Skills	2	2	-	-	50	0
109	Self learning-1 (Societal Related			-	-		
	Topic)	2	0			50	0
	Total	28	17	5	8	380	420

SEMESTER II

Course	Course	Credits	Hours/Week			IA	EoTE
Number	Title					Marks	Marks
			L	T	P

	Topic)	2	0				
	Total	28	17	5	8	450	400

- For Lateral Bridge Course will be on:
 - 1. Data Structures and Algorithms
 - 2. Statistical Techniques

SEMESTER V

Course	Course	Credits	Hours/Week		IA	EoTE	
Number	Title					Marks	Marks
			L	T	P		
501	Data Science	4	3	1	-	40	60
502	Optimization Techniques	4	3	1	-	40	60
503	Software Project Management	4	3	1	-	40	60
504	Elective-III	3	2	1	-	100	-
505	Elective-IV	3	2	1	-	100	-
506	Lab Elective-II	4	2	-	4	40	60
507	Lab on Current Trends	2	0	-	4	40	60
508	Project-IV	2	2	-	-	0	100
509	Self learning-5 (Computer Related			-	-	50	0
	Topic)	2	0				
	Total	28	17	5	8	450	400

List of Elective Groups:

These are the broad Elective groups and a student can select only one group for his specialization. Each group will have 4 subjects, of which a student will study first 2 in Semester IV and other 2 in Semester V.

Elective Group
Cloud Computing
Data Analytics
Linux
Open Source Technologies
Mobile Computing
Dot Net Technologies
Net Centric Technologies
Information Systems
IOT
Big Data
Cyber Security

SEMESTER VI

Course	Course	Credits	Hours/Week		Hours/Week		IA	EoTE
Number	Title				Marks	Marks		
			L	T	P			
601	Internship Project	10	-	-	-		100	

Practical Examinations:

For course Nos. 106,107,206,207,307,406,407,506 and 507 there will be practical examination.

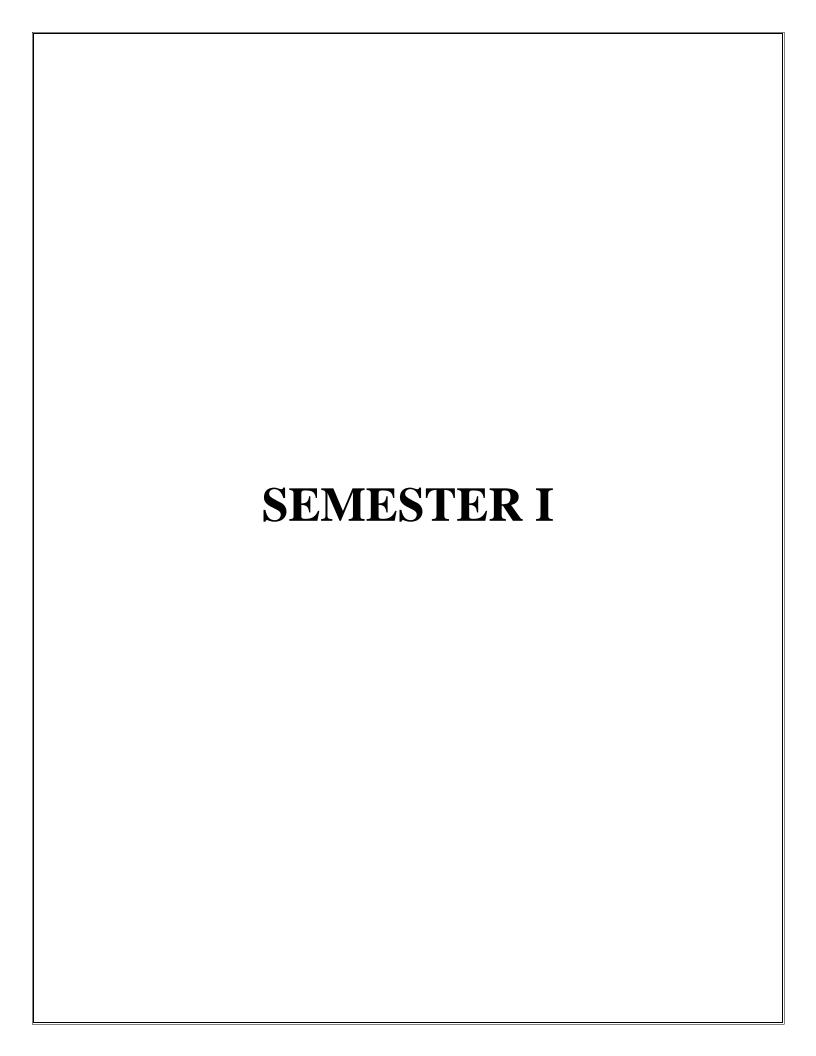

For course No 507 Lab on Current Trends, Every center can decide the Programming Language to be taught depending upon the current industry demand and students interest.

Project Viva:

For course Nos. 208,308,408,508 there will be University Project Dissertation Viva carrying 100 marks.

Self Learning:

For Self Learning- 1 (109), Self Learning- 2 (209), Self Learning- 3 (309), Self Learning- 4 (409), Self Learning- 5 (509), students should select any one recent/upcoming topic related to Societal Concerns (SEM I to SEM III) and on computer science (SEM IV and V), study it thoroughly and submit a project report at the end of the semester.

Course Number	Course Name	L-T-P- Credits	Year of Introduction
101	C Programming	3 L + 1 T + 0P = 4 C	2018-19

This is a first course in programming. The objective of this paper is to teach the Programming Language C. However, the process of learning a computer language will also be emphasized. Emphasis is also on semantics and problem solving.

Expected Outcome:

At the end of the course a student should be able:

- To solve a given problem using C Program C
- Understand and use C libraries,
- Trace the given C program manually
- Effectively use of Arrays and functions
- Write C program for simple applications of real life using structures and Unions.

t				
1	Basics to learn a Programming Language:			
	Evolution of programming languages, structured programming, the compilation process, object			
	code, source code, executable code, operating systems, interpreters, linkers, loaders, compilers,			
	fundamentals of algorithms, flow charts. Concepts of a Program and subprogram, Procedures and			
	functions, Syntactic, Semantic, and Logical Errors in a program; Program Correctness-			
	Verification and Validation, Concept of Test Data			
2	C Language Fundamentals:			
	Origins of C, Characters and Character Set of C, Variables and Identifiers, Built-in Data Types,			
	Variable Definition, Constants and Literals, Simple Assignment Statement, Operators and			

	operands, Unary and Binary Operators, Concept of Expression, Arithmetic Expressions,			
	Relational Expressions, Assignment Expressions. Evaluation of Expressions, Concepts of			
	Precedence and Associativity, Table of Precedence and Associativity. Basic Input/Output			
	Statement, The function main()			
3	Control Statements:			
	Control Structures, Decision Making within a Program, Conditions, Relational Operators, Logical			
	Connectives, Decision Making and Branching: If Statement, If-Else Statement, Switch Statement			
	Decision Making & Looping: While Loop, Do While, For Loop. Nested Loops, Infinite Loops,			
	Structured Programming			
4	Arrays:			
	One Dimensional Arrays: Array Manipulation; Searching, Linear Search, Binary Search; Finding			
	The Largest/Smallest Element in an Array; Two Dimensional Arrays: Addition/Multiplication of			
	Two Matrices, Transpose of a Square Matrix; Strings as Array of Characters			
5	Functions:			
	User defined and standard functions, Formal and Actual arguments, Functions category, function			
	prototypes, parameter passing, Call-by-value, Call-by-reference, Recursion, Storage Classes.			
	Strings in C and String manipulation functions, Input, output of string statements			
6	Pointers:			
	Address Operators, Pointer Type Declaration, Pointer Assignment, Pointer Initialization, Pointer			
	Arithmetic, Passing parameters by reference, pointer to pointer, linked list, pointers to functions,			
	Arrays and Pointers, Pointer Arrays, Dynamic memory allocation			
7	Structures, Unions: Declaration of structures, declaration of unions, pointer to structure &			
	unions. Additional Features in C: Command line arguments, bit wise operators, enumerated			
	data types, type casting, macros, the C preprocessor, more about library function

	Organization and		
	Architecture		

Main objective of this paper is to learn structure and functioning of various hardware components of digital computer. Also study the interactions and communication among these hardware components

Expected Outcome:

At the end of this course, student should be able to understand

- Simple machine architecture and the reduced instruction set computers.
- Memory control, direct memory access, interrupts, and memory organization
- Basic data flow through the CPU (interfacing, bus control logic, and internal communications).
- Number systems, instruction sets, addressing modes, and data/instruction formats.

	Course Plan		
Unit	Contents		
1	Introduction To Computer Hardware & Computer security:		
	Computer: Block diagram, Generations, types, Applications, Interconnecting the units of computer, performance of computer. Computer Security: threats and security attack, Malicious software, Hacking, Security services, Firewall.		
2	Introduction To Digital Computer – Data Representation – Data Types – Complements – Arithmetic Operations – Representations – Fixed –Point, Floating – Point, Decimal Fixed – Point – Binary Codes- Logic Gates, Boolean Algebra, Map Simplification – Combinational Circuits: Half- Adder, Full Adder- Flip Flops - Sequential Circuits		
3	Introduction To Digital Components And Micro Operations ICs – Decoders – Multiplexers – Registers – Shift Registers – Binary Counters – Memory Unit – Register Transfer Language – Register Transfer – Bus And Memory Transfers – Arithmetic, Logic And Shift Micro Operations, Arithmetic Logic Shift Unit.		

4	Computer organization And Programming –
	Instruction Codes – Computer Registers – Computer Instructions – Timing And Control – Instruction Cycle – Memory Reference Instructions – I/O And Interrupt – Machine Language – Assembly Language – Assembler - Program Loops – Programming Arithmetic And Logic Operations – Subroutines – I/O Programming.
5	Memory Organization And CPU – Memory Hierarchy – Main Memory – Auxiliary Memory – Associative Memory – Cache Memory – Virtual Memory – Memory Management Hardware – CPU: General Register Organization – Control Word – Stack Organization – Instruction Format – Addressing Modes – Data Transfer And Manipulation – Program Control, RISC
6	Input – Output Organization Peripheral Devices – Input-Output Interface – Asynchronous Data Transfer – Modes Of Transfer – Priority Interrupt – DMA – IOP – Serial Communication
7	Pipeline And Vector Processing – Parallel processing – Pipelining - Arithmetic pipeline - Instruction pipeline - RISC pipeline, - Vector processing - Array processor

Course Number	Course Name	L-T-P- Credits	Year of Introduct ion
103	Database Management Systems	3L + 1T + 0P = 4C	2018-19

The goal of this course is to teach the fundamentals of the database systems at a master level. A variety of topics will be covered that are important for modern databases in order to prepare the students for real life applications of databases. The course aims to impart knowledge of the concepts related to database and operations on databases. It also gives the idea how database is managed in various environments with emphasis on security measures as implemented in database management systems.

Expected Outcome:

After going through this course a student should be able to:

- Understand the concept of database and techniques for its management.
- Design different data models at conceptual and logical level and translate ER Diagrams to Relational Data Model.
- Normalize the database.
- Write queries using Relational Algebra.
- Describe the file organization schemes for DBMS.
- Describe and use features for Concurrency and Recovery.
- Understand data security standards and methods.
- Understand the fundamentals of Distributed Database Systems.

Course Plan

Unit	Contents		
1	Introduction to DBMS:		
	Difference between Data, Information, Data Processing & Data Management. File		
	Oriented Approach, Database oriented approach to Data Management, Need for DBMS,		
	Characteristic of Database, Database Architecture: Levels of Abstraction, Database		
	schema and instances, 3 tier architecture of DBMS, Data Independence. Database users,		
	Types of Database System. Database Languages, DBMS interfaces.		
2	Data Modeling in Database :		
	Data Models, Logical Data Modeling: Hierarchical Data Model, Network Data Model,		
	Relational Data Model. Conceptual Data Modeling: Entity Relationship Model, Entities,		
	Attributes, Types of Attributes, Relationships, Relationship set, Degree of relationship		
	Set, Mapping Cardinalities, Keys, ER Diagram Notations, Roles Participation: Total and		

3	Normalization and Relational Algebra: Normalization Vs De-Normalization, Decomposition, Lossy and Lossless Decomposition, Functional Dependencies, Normal forms 1NF, 2NF, 3NF, BCNF, Case Studies on Normalization.
	Relational Algebra: Keys: Composite, Candidate, Primary, Secondary, Foreign, Relational Relational Algebra Operators: Select, Project, Divide, Rename. Set Operations: Union, Intersect, Difference,
	And Product, Joins: Outer Joins, Inner Joins with example.
4	File Structures and Data Administration: File Organization, Overview of Physical Storage Media, Magnetic Disk, RAID, Tertiary Storage, Storage Access, Data Dictionary Storage, Organization of File (Sequential, Clustering), Indexing and Hashing, Basic Concepts, indices, B+ Tree index file, B- tree index file, Static hashing, Dynamic Hashing.
5	Concurrency Control And Recovery Techniques:
	Concurrency Control: Single User and Multiuser systems, Multiprogramming and Multiprocessing, Basic Database access operations, Concept of transaction, transaction state, ACID properties, Schedules, Serializability of schedules., Concurrency Control, Need for Concurrency control, lock based protocols, timestamp based protocols, Multiple granularity, Multiple Version Techniques, Deadlock and its handling, Wait-Die and Wound-Wait, Deadlock prevention without using timestamps, Deadlock detection and time outs, Starvation Recovery Techniques:
	Database Recovery, Types of Failures, Storage Structure: Volatile, Non Volatile and stable storage, Data access. Recovery and atomicity, Recovery Techniques / Algorithms: Log Based Recovery, Check points, Shadow Paging
6	Data Administration And Security: Data administration, Role and Responsibility of DBA, Creating/Deleting/Updating table space, Database Monitoring, User Management, Basic data security principles – user privileges, data masking, encryption and decryption. Data Security Implementation, revalidation of user, role, privileges. Data Quality Management, Basic quality principles, data quality audit, data quality improvement
7.	Introduction to Advance Databases: Distributed Database: Heterogeneous and Homogeneous Databases, Distributed database features and needs, Advantages and Disadvantages, Distributed DatabaseArchitecture. Levels of distribution, transparency, replication. Fragmentation. Data Warehouse: Data Warehouse defined, Need for Data Warehouse, Characteristics of Data Warehouse, Multidimensional Data Model, OLTP vs. OLAP, A three tier Data Warehouse

Course Number	Course Name	L-T-P- Credits	Year of Introduction
104	Discrete Structures	2L + 1T + 0P = 3C	2018-19

- 1.To learn basic mathematical course ,eg. Sets, Functions, Graph.
- 2. To be familiar with formal mathematical reasoning eg. Logic proofs.
- 3.To improve problem solving skills.
- 4. To see the connections between Discrete structure Computer Science

Expected Outcome:

- a) Apply standard Mathematical methods.
- b)Write code to implement solution procedures.
- c)Search for information in tacking advanced problems.
- d)Formulate AI problems mathematically.

	Course Plan		
Unit	Contents		
1	Propositional logic: Proposition logic, basic logic, logical connectives, truth tables, tautologies, contradiction, normal forms(conjunctive and disjunctive), modus ponens and modus tollens, validity, predicate logic, universal and existential quantification. Notion of proof: proof by implication, converse, inverse, contrapositive, negation, and contradiction, direct proof, proof by using truth table, proof by counter example.		
2	Set and Relation Set Theory: Definition of Sets, Venn Diagrams, complements, Cartesian products, power sets, counting principle, cardinality and count ability (Countable and Uncountable sets), Partition of set, proofs of some general identities on sets, Fuzzy set, Fuzzy set operation, rough set concept Relation: Definition, types of relation, composition of relations, domain and range of a relation, pictorial representation of relation, properties of relation, partial ordering relation, Equivalence Relation, Relation Matrices		
3	Function : Definition and types of function (one to one, onto, Inverse) composition of functions, Graph of Functions, Some Functions in Computer Science, Growth of Functions recursively functions.		
4	Algorithm, the Integers and Matrices: Algorithm, growth of function, Complexity of algorithm, Primes and Greatest Common Divisors, Integers algorithm		

5	Partial Order and Structure: Partially Ordered,			
	Sets ,Lexico graphics Order, Hasse Diagram, Maximal and Minimal elements of a Poset,			
	Concept of Lattice, Boolean Functions, Logic Gates, Minimization of Combination circuit			
6	Combinatories:			
	Mathematical induction, recursive mathematical definitions, basics of counting, permutations, combinations, inclusion-exclusion, recurrence relations (nth order recurrence relation with constant coefficients, Homogeneous recurrence relations, Inhomogeneous recurrence relation), generating function (closed form expression, properties of G.F., solution of recurrence relation using G.F, solution of combinatorial problem using G.F.)			
7	Modelling Computation: Language and Grammar, Finite State Machine with output, Finite State Machine with no output, Language Recognition			

Course Number	Course Name	L-T-P- Credits	Year of Introduction
105	Management Functions	2L + 1T + 0P = 3C	2018-19

- 1. To orient the students to principles of management
- 2.To make them comprehend the process of management
- 3.To internalize the principles through rigorous assignments where they shall observe, analyze and infer the presence of principles transformed into practice.

Expected Outcome:

At the end of the course, the students shall acquire

- 1. Understanding of functions of management
- 2. Understand the principle of management woven in to the process of management
- 3. Understand how they are modified in to practice to suit the requirements
- 4. How IT influences the process of management

	Course Plan		
Unit	Contents		
1	The need of Management Study, Process of Management, Characteristics of Professional Management, Brief Review of Management Thought Social Responsibility of Management		
2	Decision Making Process , Planning and Steps in Planning , Types of Plan Making Planning Effective , Case Study on Planning, MBO		
3	Organization, Meaning and Process , Departmentalization,, Organization Structure , Authority and Delegation , Centralization verses Decentralization , Team Work , Case Study		
4	Co-ordination – meaning and need , Techniques of establishing Co-ordination Difficulties in establishing co-ordination , Case Study		
5	Formal and Informal Organization, Manpower Planning, Recruitment and Performance Appraisal, Compensation and Incentives, issues related to Retention Case study		
6	An overview of Communication, Supervision and Direction, Leadership Styles, Control – need and types and control techniques. In addition there shall be tutorials of written examination type, field study and presentation.		
7.	Case Studies		

Course Number	Course Name	L-T-P- Credits	Year of Introduction
106	Web Supporting Technologies	2L-0T-2P=4C	2018-19

- To understand the basic concepts of the World Wide Web
- To understand and practice HTML as markup language
- To understand and practice embedded dynamic scripting on client side Internet Programming
- To understand and practice web development techniques on client-side
- To understand and practice server-side scripting

Syllabus Outline:

- Understanding of internet and intranet- working of WWW, types Protocols and working of HTTP and types of servers
- UI Design Markup Language: Introduction to HTML5 Cascading Style Sheet: Introduction to CSS3.
- Client Side Scripting using JAVASCRIPT Introduction to JavaScript Document Object Model -Event Handling - Controlling Windows & Frames and Documents -Browser Management and Media Management - Object-Oriented Techniques in JavaScript - JQuery.
- Server SideScripting using PHP Introduction to PHP Programming basics Reading Data in WebPages - Embedding PHP within HTML - Establishing connectivity with MySQL database.

Expected Outcome:

Upon successfully completing this course the student will be able to

- Understand concept of internet and how it functions
- Use HTML tag to format contents of web page
- Use Cascading Style Sheets (CSS) to apply user defined look and feel
- Apply Java Script to validate form data and generate dynamic contents
- Make use of PHP to generate server side response using MYSQL as databse

Syllabus/Course Outline

Unit	Contents
1	Understanding internet and intranet, Introduction toWWW, WWW Architecture, Concept of protocol ant its types: SMTP,POP3,File Transfer, Overview of HTTP, HTTP request and response. Various web server, using Apache as web server, Installation of Apache, Apache Directory Structure, apache configuration, creating application folder, storing and accessing files from server
2	Types of Markup Language and HTML as markup language, basic structure of HTML, Head Section and elements of head section, Meta tags and external link tags HTML body content tags: header tags, Paragraph, span and pre tags, text formatting tags, Ordered and unordered list tag, Table tag, div tag, Frames and framesets, Anchor Links and named anchors, image tag and using image mapping for hotspot, working with forms: Form tag, POST and GET methods, working with Text input, Text Area, Checkbox and radio and other form elements;
3	Introducing CSS, Types of style sheets: inline, embedded and external style sheets, working with CSS properties: text properties, color and background properties, border and shading, box and block properties, positioning with CSS, various types of CSS selectors: universal, class, ID, child, descendent, adjacent sibling, attribute and query.
4	Client Side Scripting: Introduction to JavaScript, data types, Operators, conditional and iterative Statements, Introduction to arrays, arrays with methods, Math, String and Date objects, working with DOM: Window, Navigator, History, Location, Link, Anchor and form elements, functions and objects, methods, handling events and form validations
5	Advanced JavaScript: Browser Management and Media Management – Classes – Constructors – Object-Oriented Techniques in JavaScript – Object constructor and Prototyping - Sub classes and Super classes – JSON - JQuery and AJAX.
6	Why PHP and MySQL?, Server-side web scripting, Installing PHP, Adding PHP to HTML Syntax and Variables, PHP control structures and loop, Passing information between pages, Strings, Arrays and Array, Functions, Numbers, working with String and Regular Expressions
7	Concept of Cookies and sessions, when and how to use cookies and sessions, Using MySQL to create database and tables, using queries to inset and update data, using PHP to interact with MySQL, Displaying data from tables in tables, using form data to insert, update database, deleting data from table by getting criterion through forms, working with E-Mail

Course Number	Course Name	L-T-P- Credits	Year of Introduction
107	C Lab	0L + 0T + 4P = 2C	2018-19

This is companion course of C Programming

Syllabus Broad Units:

This Companion course of C programming; Practical aspects of C programming towards problem solving is covered.

Expected Outcome:

The students will develop adequate programming skills with respect to following

- 1. Implement a real world problem using basic constructs of C language.
- 2. Develop an application using Decision making and looping
- 3. Make use of proper operators to solve problem.
- 4. Make use of Arrays and pointers efficiently and handling strings.
- 5. Comprehend the dynamic memory allocation and pointers in C.
- 6. Able to define new data types using enum, structures and typedef.

References (Books, Websites etc):

- 1. Let us C Y.Kanetkar, BPB Publications4. YashawantKanetkar, let Us C, BPB Publication
- 2. Programming in C Gottfried B.S., TMH 2.
- 3. The 'C' programming language B.W.Kernighan, D.M.Ritchie, PHI
- 4. Programming in ANSI C Balaguruswami, TMH
- 5. C- The Complete Reference H.Sohildt, TMH
- 6. A Structured Programming Approach using C B.A. Forouzan& R.F. Gillberg, THOMSON Indian Edition
- 7. Computer fundamentals and programming in C PradipDey& ManasGhosh, OXFORD

C Lab Outline

Sr.	Programming Exercises		
No			
1	Compilation and Executing programs		
	Arithmetic operations		
	Use of Symbolic constants		
	Demonstrating the following gcc options -o, -c, -D, -l, -I, -g, -E		
	Note :Algorithm of every program should be written. Properly document the programs		
	using comments. Author name and date, purpose of each variable and constructs like		
	loop and functions should be indicated/documented.		
	gcc or an equivalent compiler is assumed.		
2	Program to demonstrate the following		
	- Branching		
	- Nested Branching		
	- Looping		

	- Selection	
3	Working with functions	
	 Writing function prototype and definition 	
	 Using functions to solve problems (Calling a function) 	
	 Using recursion 	
	 Storage classes - Using register, extern and static 	
4	Using debugger and Creating Libraries	
	Important Commands - break, run, next, print, display, help	
	Functions	
	Creating Header file for Function Prototype	
	Compiling and storing Function Definition in Library	
	(archive) file	
5	Arrays	
	1D - Linear Search, Sort	
	2D - Matrix operations	
	Strings, Structure, Union	
6	Pointers, Dynamic Memory Allocation	
	Structure Pointer	
	Array of Pointers, Ragged Arrays, Function pointer	
7	Structures	
	Making use of structures to define new types(user defined types)	

Course Number	Course Name	L-T-P- Credits	Year of Introduction
108	Soft Skills	2L+0T+0P=2C	2018-19

- 1. To provide Confidence building and soft skills development.
- 2. To develop decision making and analytical skills.
- 3. To let students make a transition from the academic mode to the corporate and entrepreneurial mode

Expected Outcome:

- This course would be handy for those who are attending interviews at the company premises, even if it is arranged by the institute. You need to differentiate yourself as a better candidate than others, which is the key to get a job.
- This will go a long way in improving your career prospects by developing skills required by a practicing manager. Thus, you will be able to handle challenging corporate assignments. Being a fresher, you will be closely monitored by your superior. This course will give you confidence to impress them with your professional attitude.
- Industry expects to spot out people for better positions, with the qualities of leadership. This is where this program will help you acquire some of the qualities of leadership.

Suggested MOOC:

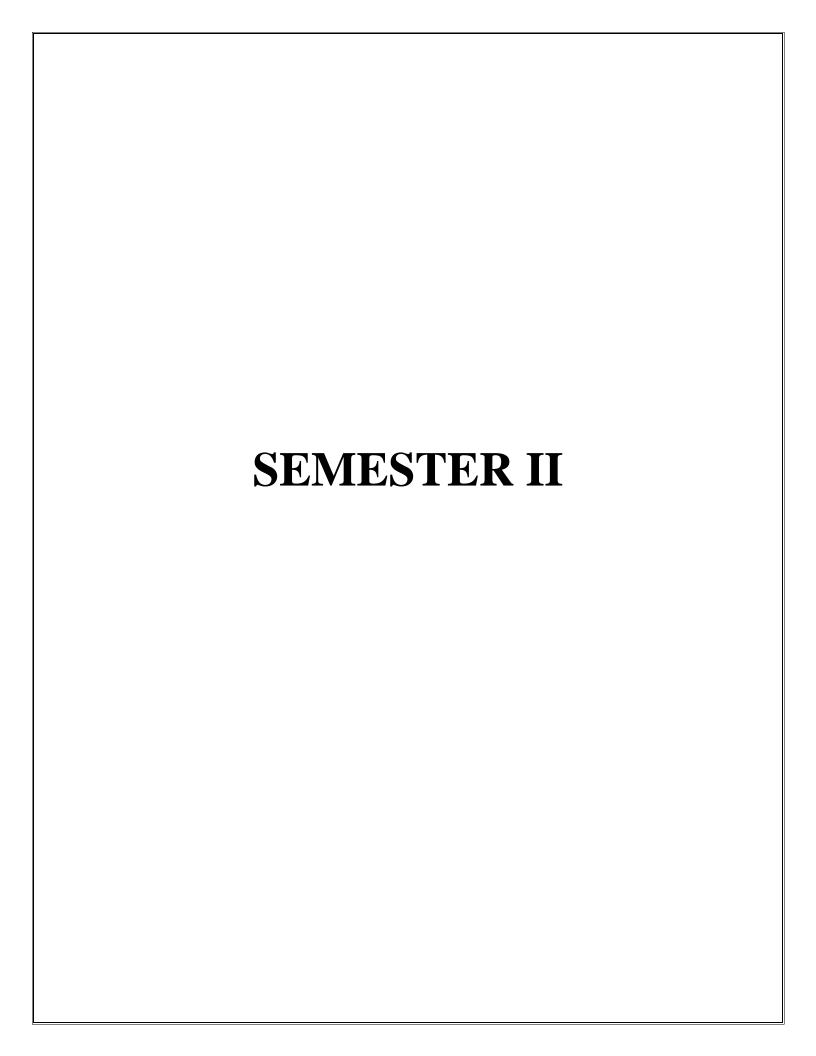

Please refer these websites for MOOCS:

NPTEL / Swayam

www. edx.com

	Course Plan
Sr.	
No	
1	Business Communication Skills – Email correspondence:
	E-mail etiquette and Writing Skills, Features of Business Correspondence, Tips for
	writing Business E-mails, Do's and Don'ts of Business Communication, Examples and
	Exercises
2	The Art of Effective Communication:
	Communication skills: the importance of removing barriers, Source, Encoding, Channel,
	Decoding, Receiver, Feedback, Johari's Window, Public Speaking and Presentation tips,
	Body Language Tips, Listening skills, Common Grammatical mistakes in Written and
	spoken communication, Negotiation
3	Time Management:
	Importance of setting Tasks, Applying basic principles of Time management; identify
	productivity cycles, and set goals and priorities, Create a time management plan and a
	daily plan, Effectively utilize time by using technology and reducing time wastage.
	Manage interruptions, increase meeting productivity, overcome personal time wasters,
	and prevent personal work overloads, Screen and organize information to reduce
_	information overload
4	How to create a winning CV:
	Designing an Impressive CV, Defining the objective, Customizing the CV for each job,

	Identifying and Highlighting the right set of strengths, Presentation of academic and		
	professional achievements, Formatting Styles, Do's and Don'ts and common mistakes,		
	Examples and Exercises		
5	How to prepare for Interview:		
	Introspection: Knowing yourself, your comfortable areas or subjects, Companies,		
	sectors, functions, Employer Research, Skill set and competency mapping, Attire and		
	Etiquette: Greetings, posture, handshakes, manners and actions, Common Interview		
	blunders, Frequently asked questions for Freshers and Experienced professionals,		
	Simulated Interview Situations, Do's and Don'ts before an Interview, Common formats		
	of Company Interview assessments, What to speak?, Latest developments about the		
	specific sector for last 5 years, Study of regulators for sectors.		
6	Preparing for Group discussion and aptitude test:		
	Structure and Format of a GD, Difference between a Discussion & an Argument,		
	Observing, Reflecting and designing responses within a group, The art of being assertive		
	and persuasive, Defending your turf, Defining the correct Body Language and posture,		
	Deconstructing Topics, Common Do's and Don'ts, Practice and Exercise		
7	Fear Factor: Removing Stage Fear		
	Presentation Skills, Public Speaking skills, Importance of Eye Contact, Audience		
	engagement, Forms of speech, Content Preparation, Debating, Extempore, Do's and		
	Don'ts, Sample Exercises		
	1 2 on to, compre zincrosco

201	Data Structures and	3L + 1T + 0P = 4C	2018-19
	Algorithms		

- To make familiar with linear & non linear data structures
- To develop skills to analyze the problem given and to design & develop an efficient solution to given problem
- To develop capability to choose appropriate data structures for given problems
- To imbibe programming skills & thereby making industry ready

Syllabus Broad Units:

Expected Outcome : After undergoing this course, student will

- 1. Have thorough knowledge about data structures
- 2. Ability to design& develop program using linear data structures& non linear data structures for solving problems
- 3. Ability to choose appropriate data structures for problem solving
- 4. Ability to use combination of these data structures for problem solving.

Suggested MOOC:

Data structures and Algorithms, Prof. SudarshanIyengar, IITRopar, 8 weeks, Rerun Feb 05, 2018 https://onlinecourses.nptel.ac.in/noc16 cs06 at NEPTEL

	Course Plan
Unit	Contents
1	Elementary Data Structures - Basic concepts such as data object, array, and record; Operations and relations on data objects; definition of data structure; Built-in data types as examples of data structures; concept of abstract data type; notation to specify an abstract data type; concepts of pre-conditions and post-conditions; Implementation of an ADT in a language; Specification and implementation of simple data structures such as Integer, Rational, Currency, Date, Temperature, distance, Pay, Marks, Grade_card etc.
2	Linear Data Structures (Representation in Memory and operations like insertion, deletion and traversal) – one and multidimensional array, Sparse Matrics, Pointer arrays, single link list,

	circular link list, double link list, applications of Linked list,: Sparse Matrix Manipulation,
	Polynomial Representation, Dynamic storage Management
3	Particular Linear Data Structures (Representation in Memory and operations like insertion, deletion and traversal) - Stacks: Applications: Evaluation of Arithmetic Expression, implementation of recursion, factorial calculation, Quick Sort, Tower of Hanoi Problem, queues, circular queue, deques; Application of queues abstract data types; Array and linked list implementations of stacks, queues, and deques;
4	File Handling: Creation, reading writing in a file. Pattern Matching and Extraction of data from a file. Reading and writing from files.
5	Hierarchical data structures - General trees and related concepts; depth first and breadth first traversal of trees; n-ary trees and important properties of n-ary trees; binary trees and their properties; binary tree traversal algorithms. Applications of Trees. B Tree indexing, Operations on a B Tree, SETS: Representation of Sets, Operations on Sets, Applications of Sets
6	The problem of search – linear and binary search algorithms and their efficiency; binary search trees and operations on binary search trees; Improving the efficiency of search through Balanced trees – AVL trees and Red-black trees, concepts of rotation. Hash tables and related concepts in detail.
7	The problem of sorting – The standard sort algorithms and their efficiencies; Merge sort and quick sort algorithms and their efficiencies. The binary heaps, their array implementation; Operations on heaps and heap sort algorithm.

Course Number	Course Name	L-T-P- Credits	Year of Introduction
202	Operating Systems	3+1+0=4C	2018-19

The overall aim of this course is to provide a general understanding of how a computer works. This includes aspects of the underlying hardware as well as the structure and key functions of the operating system. Case studies will be used to illustrate and reinforce fundamental concepts.

Syllabus Broad Units: 7

Expected Outcome:

At the end of this course, student should be able to

- Explain the concepts of process, address space, and file
- Compare and contrast various CPU scheduling algorithms
- Understand the differences between segmented and paged memories, and be able to describe the advantages and disadvantages of each
- Compare and contrast polled, interrupt-driven and DMA-based access to I/O devices
- Understand functioning and working of Windows as well as Unix operating system.

References (Books, Websites etc):

www.alison.com

Course Plan

Unit **Contents** 1 **Unit1: Introduction to Operating system:** Definition, Importance and functions of operating systems, Types: Batch, Timesharing, Multitasking, multiprogramming, multiprocessing, Online operating system, Real time, distributed operating systems. Various Views: Command language users view, system call users view. Operating system concept: Processes, Files, The shell. Structures: Monolithic system, layered system, Virtual Machine, Client server model. 2 **Processes:** Process concept, Implicit and explicit tasking, process relationship (cooperation and competitions). Operating systems view of processes OS services for process management. Scheduling and types of Schedulers, Scheduling algorithms: First come first served, shortest remaining time next, Time slice scheduling, Priority based preemptive scheduling, multiple level queues, multiple level queues with feedback, Guaranteed scheduling, Lottery

	scheduling. Performance Evolution.
3	Memory Management: Basic Memory Management, monoprogramming without paging or swapping, multiprogramming with fixed partitions. Swapping: Memory Management with bit maps, and linked list. Virtual Memory, Page replacement algorithms: Optimal Page replacement algorithm, Not recently Page replacement algorithm, First in first out Page replacement algorithms, second chance Page replacement algorithms, clock Page replacement algorithms, least recently Page replacement algorithms, simulating LRU in software. Design issues for paging. Segmentation: Implementation of pure segmentation, segmentation with paging with example.
4	Interprocess communication and Synchronization: Need, Mutual Exclusion, Semaphore definition, Busy- wait implementation, characteristics of Semaphore. Queuing implementation of semaphore, Producer consumer problem. Critical region and conditional critical region, what are monitors? Need of it, format of monitor with example. Messages: Basics, issues in message implementation, naming, copying, Synchronous vs asynchronous message exchange, message length, ICS with messages, interrupt signaling via messages.
5	Deadlocks: Conditions to occurs the deadlock, Reusable and consumable resources, deadlock prevention, Deadlock Avoidance, resource request, resource release, detection and recovery,
6	File systems: Files- naming, structure, types, access, attributes, operation. Directories- system, path and operations. Implementing file and directories, disk space management, file system reliability and performance. Environment, Security flaws, Security attacks, principles for Security, user authentication. Protection domains, access control lists, capabilities.
7	Input/ output: Principles of I/O hardware: I/O devices, device controller, DMA, Principles of I/O software: goals, interrupt handler, device drivers, Device independent I/O software. RAM Disk Hardware and software, DISK Hardware and software.

Course Number	Course Name	L-T-P- Credits	Year of Introduction
203	Software Engineering	3L + 1T + 0P = 4C	2018-19

To introduce the current methodologies involved in the design and development of Software over its entire life cycle.

Expected Outcome:

At the end of this course, student should be able to:

- Understand life cycle models, Requirement elicitation techniques, understand the concept of Analysis and Design of software.
- Implement software engineering concepts in software development to develop quality software which can work on any real machine.

References (Books, Websites etc):

- SOFTWARE ENGINEERING A PRACTITIONERS APPROACH seventh edition BY Roger S. Pressman McGraw Hill International Edition.
- Software Engineering by Sommerville, Pearson Education, 7th edition
- Software Engineering by K.K. Aggarwal&Yogesh Singh, New Age International Publishers.

	Course Plan
Unit	Contents
1.	Introduction to Software Engineering Software, software characteristics, Difference between software engineering and
	software programming, Members involved in software development. Need of Feasibility study, types of Feasibility study, Cost Benefit Analysis.
	General software development life cycle with all phases. Overview of software models (Waterfall, Prototyping, Spiral and Rapid Application Development model). Agile Software Development methodologies.
2.	Requirement Engineering Concepts and Methods
2.	What is Requirement Engineering, Types of requirements, Requirement elicitation techniques- Traditional methods and Modern methods, Verification and validation process.
	Principles of Requirement Specification, Software Requirement Specification document Outline Characteristics of good SRS: - correct, complete, unambiguous, consistent, modifiable, traceable, Understandable
	Case study on DFD and ERD mechanism.
3.	Design Concept and Methods
	Software Design and software Engineering. Software Design process and principles,
	Design concepts: Abstraction, Refinement, Modularity, Architecture, Control hierarchy, Structural partitioning, Data structure, Procedure and Data hiding
	Modular design: Functional independence, Cohesion and Coupling concepts
	Architectural design process: Transform flow and Transaction flow
	User Interface design: - Elements of good design, design issues, Features of modern GUI,

	Guidelines for interface design Procedural design: - Structured Programming, Program Design Language Report Design
4.	Software Quality Assurance Quality concept: (quality, quality control, quality assurance, cost of quality), SQA activities, SQA plan. Formal Technical review: Review meeting, review reporting and review guidelines Software Configuration Management: - What is configuration management, Baseline, Software Configuration items. SCM process- Identification of objects, Version control and Change control
5	Software Testing and Testing Strategies
	Software Testing Fundamentals:-Testing Objectives and Testing Principles. White Box Testing, Black Box Testing: - Graph Based Testing Methods, Equivalence Partitioning, Boundary Value Analysis. Testing Strategies for Conventional Software: - Unit Testing, Integration Testing (Topdown and Bottom-up Integration) Validation Testing: - Validation Test Criteria, Configuration Review, Alpha and Beta Testing System Testing: - Receivery Testing: Sequrity Testing, Strategy Testing, Performance
	System Testing: - Recovery Testing, Security Testing, Stress Testing, Performance Testing, Deployment Testing
	The Art of Debugging – The Debugging Process.
6	Maintenance and Reengineering
	Software maintenance: - Importance and types of maintenance, Concept of Reengineering, Software reengineering process model Reverse engineering: - to understand process, data and user interfaces Restructuring: Code and Data restructuring Forward engineering: - for client server architecture and user interfaces
7	Computer Aided Software Engineering What is CASE? Importance of CASE tools Various Tools: - 1) Information engineering 2) Project planning tools 3) Risk analysis tools 4) Project management and testing tools 5) Tools for Quality assurance 6) Software Configuration Management 7) Analysis and design 8) Database management 9) Interface design and programming tools

Course Number	Course Name	L-T-P- Credits	Year of Introduction
204	Statistical Techniques	2+1+0=3C	2018-19

The main objective of this course is to acquaint students with some basic concepts in Statistics.

They will be introduced to some elementary statistical methods of analysis of data.

Syllabus Broad Units:

Expected Outcome:

- (i) To compute various measures of central tendency, dispersion, skewness and kurtosis.
- (ii) To analyze data pertaining to attributes and to interpret the results.
- (iii) Tto compute the correlation coefficient for bivariate data and interpret it.
- (iv) To fit linear, quadratic and exponential curves to the bivariate data to investigate relation between two variables.
- (v) To fit linear regression model to the bivariate data
- (vi)They are able to construct predicate model.

Reference Books:

Fundamentals of Statistics, S.C.Gupta, Seventh Edition, Himalaya Publishing House

Suggested MOOC:

Please refer these websites for MOOCS:

NPTEL / Swayam

www.edx.com

www.coursera.com

Course Plan

Unit	Contents
1	Introduction to Statistics:
	Meaning of Statistics as a Science, Importance of Statistics Scope of Statistics, Statistical organizations in India and their functions: CSO, ISI, NSS, IIPS (Devnar, Mumbai), Bureau of Economics and statistics, Types of data: Primary data, Secondary data, Cross-sectional data, time series data, directional data, Classification: Raw data and its classification, ungrouped frequency distribution, grouped frequency distribution, cumulative frequency distribution, and relative frequency distribution.
2	Measures of Central Tendency
	Concept of central tendency of statistical data, Statistical averages, characteristics of a good statistical average. Arithmetic Mean (A.M.): Definition, effect of change of origin and scale, combined mean of a number of groups, merits and demerits, trimmed arithmetic mean. Mode and Median: Definition, formulae (for ungrouped and grouped data), merits and demerits, Quartiles, Deciles and Percentiles (for ungrouped and grouped data), Geometric Mean (G.M.): Definition, formula, merits and demerits. Harmonic Mean (H.M.): Definition. Formula, merits and demerits. mean Weighted Mean: weighted A.M., G.M. and H.M. Measures of Dispersion: Concept of dispersion, characteristics of good measure of dispersion. Range, Quartile deviation Mean deviation: Definition, merits and demerits, Variance and standard deviation

3	Moments, Skewness and Kurtosis
	Raw moments (m'r) for ungrouped and grouped data. , Central moments (mr) for
	ungrouped and grouped data, Concept of skewness of frequency distribution, positive
	skewness, negative skewness, symmetric frequency distribution, Karl Pearson's coefficient
	of skewness, Measures of skewness based on moments ($\beta 1, \gamma 1$) Concepts of kurtosis,
	Measures of kurtosis based on moments ($\beta 2, \gamma 2$).
4	Theory of Attributes
	Attributes: Concept of a Likert scale, classification, notion of manifold classification,
	dichotomy, class- frequency, order of a class, positive class frequency, negative class
	frequency, ultimate class frequency, relationship among different class frequencies (up to
	three attributes), and dot operator to find the relation between frequencies, fundamental set
	of class frequencies. Consistency of data upto 2 attributes. Concepts of independence and
	association of two attributes. Yule's coefficient of association (Q),
5	Correlation:
	Bivariate data, Scatter diagram and interpretation., Concept of correlation between two
	variables, positive correlation, negative correlation, no correlation. variance between two
	variables, Karl Pearson's coefficient of correlation (r), Spearman's rank correlation
	coefficient, compute Karl Pearson's correlation coefficient between ranks
6	Regression: Meaning of regression, difference between correlation and regression,
	Concept of error in regression, error modeled as a continuous random variable. Simple
	linear regression model Estimation of a, b by the method of least squares. Interpretation of
	parameters.
7	Times Series
	Introduction, Component of a time series, Analysis of time series, Mathematical models for
1	time series, Measurement of Seasonal Variations, Measurement of Cyclical Variations
	, Measurement of Irregular Variations.

Course Number	Course Name	L-T-P- Credits	Year of Introduction
205	Financial Accounting	2L+1T+0P=3C	2018-19

- 1. To impart basic accounting knowledge
- 2. To enable the students to understand basic accounting principles, practice and its applications in modern business.

Prerequisite:

Students should know the basic principles of accounts and concepts.

Expected Outcome:

- 1) The knowledge of accounting and its principles at basic level.
- 2) Practical's in Tally and Excel for Financial Accounting assignments

References (Books, Websites etc):

- 1. Anil Chowdhry, Fundamentals of Accounting & Financial Analysis (PearsonEducation)
- 2. M.E.ThukaramRao, Accounting for Managers.(New Age International Publishers)

Course Plan

Unit	Contents
1	Unit 1: Introduction:
	Need for Accounting, Financial Accounting-definition, Scope and objectives.
	Accounting v/s Book Keeping. Limitations of Financial Accounting, End users of
	financial statements. Accounting Concepts and Conventions, Branches of accounting.
	Accounting Standard-Scope and Functions.
2	Unit 2: Journal and Ledger:
	Journal-importance and utility, classification of accounts, journalizing of transactions.
	Ledger- meaning and utility, posting and balancing of account, Trial Balance- meaning
	and purpose, preparation of a trial balance.
3	Unit 3: Preparation final accounts:
	Preparation of Trading and Profit & Loss Account and Balance Sheet of sole
	proprietary business.
4	Unit 4: Depreciation:
	Meaning, need & importance of depreciation, methods of charging
	depreciation.(WDV & SLM)
5	Unit 5: Introduction to International Accounting Standards:
	Need for International Financial Reporting Standards (IFRS), Disclosure of
	Accounting Policies, reporting needs of emerging economies, IFRS for Small and
	Medium Enterprises(SMEs).

6	Unit 6:Computerized Accounting: Computers and Financial application, Accounting Software packages. (Orientation level)
7	Unit-7: Practical Applications on Tally package for accounting and its Implementation . Accounting formulas in Excel and its implementation for practical assignments

Course Number	Course Name	L-T-P- Credits	Year of Introduct ion
206	Database Management Systems Lab	2L+0T+2P=4C	2018-19

- The main objective is to teach the concepts related to database its techniques and Operations.
- SQL (Structured Query Language) is introduced in this subject.
- This helps to create strong foundation for application of database design.

Pre-requisites:

- Concept of Database Management Systems,
- Familiarity with data processing concepts and applications.

Expected Outcome:

At the end of this course, students should be able to:

- Understand the theoretical and physical aspect of a relational database.
- Implementation of RDBMS concepts through Oracle.
- Construct Simple and complex queries on sample datasets
- Writing PL/SQL blocks

References (Books, Websites etc.):1. IvanBayross SQL,PL/SQLTheProgramming LanguageofOracle 3rd Revised Edition BPB Publications.

This is companion course of Data Structures and Algorithm

Syllabus Broad Units:

This Companion course of Data Structure and algorithm. Algorithms to use different data structures are covered in theory. Students will implement C Programs for these data structures.

Expected Outcome:

The students will develop adequate programming skills with respect to following

- 1. Implement a real world problem using appropriate data structure.
- 2. Implement data structures like array, stack, queue, linklist and applications of these data structures.
- 3. Use files for reading, writing and manipulation.
- 4. Make use of appropriate searching and sorting techniques appropriately.

References (Books, Websites etc):

DS Lab Outline

Sr.	Programming Exercises
No	
1	Specification and implementation of simple data structures such as Integer, Rational, Currency,
	Date, Temperature, distance, Pay, Marks, Grade_card etc.
	Use Linux environment to execute C Programme.
	Note :Algorithm of every program should be written. Properly document the programs
	using comments. Author name and date, purpose of each variable and constructs like loop
	and functions should be indicated/ documented.
	gcc or an equivalent compiler is assumed.

- 2 Program to demonstrate the following:
 - insertion, deletion and traversal in one and multidimensional array, single link list, circular link list, double link list,

Addition of Polynomial using array/ link list

- 3 insertion, deletion and traversal in Stacks, queues, circular queue, deques, :
 - Programs to demonstrate:
 - Evaluation of Arithmetic Expression,
 - implementation of recursion like factorial calculation, Quick Sort, Tower of Hanoi Problem
 - linked list implementations of stacks, queues, and deques;
- 4 Programs to demonstrate:
 - Creation, reading writing in a file.
 - Pattern Matching and Extraction of data from a file.
 - Reading and writing from files.
- 5 Programs to demonstrate:
 - binary tree traversal
 - depth first and breadth first traversal of trees
- **6** Programs to demonstrate:
 - linear and binary search algorithms and their efficiency;
 - The standard sort algorithms (bubble, selection, insertion) and their efficiencies;
 - Merge sort and quick sort algorithms and their efficiencies.
